

Influenza: Evolution & Impact

LIVE WEBINAR SERIES

Date: 1st September 2022, Thursday

Time: 12:45 – 2:00 pm

Seasonal influenza infects 5-15% of the human population annually.¹ This is attributed to the continued evolution of influenza viruses, which allows for the reinfection of previously infected or vaccinated individuals and impacts influenza vaccine efficacy.¹ As our knowledge of influenza evolution increases, vaccination and public health strategies should also be increased to control future influenza infections.
